DeleteFIX Photo also recovers a wide variety of file formats such as: JPEG, X3F, PEF, NEF, CR2, ORF, MRW, ARW, SR2, CRW, CCD-RAW, RAF, DCR, DNG and movie file formats WMV, ASF, AVI, MPEG, MPG, MP4, MOV and DV.

DeleteFIX Photo will recover photos that have been deleted due to human error such as accidental deletion, accidental reformatting or removing the memory card while the camera is still on. DeleteFIX Photo will also recover photos that have been lost due to hardware error or in any situation in which the photos cannot be accessed.

DeleteFIX Photo is available in a free demo edition. The demo allows the user to recover, view and save photo files although they will be partly covered by a watermark. The demo can be registered into the full edition of the program by placing an order over the fully automated, secure order site.
